No.F.80(1)-PWD(W)/2018

Dated, the 3rd June, 2019.

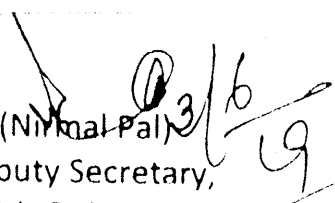

MEMORANDUM

It is observed that the cost of bricks and brick chips (aggregates) has been increasing gradually due to huge demand for the construction of buildings in all public & private sectors and construction of roads. At present cost of brick chips is nearer to the cost of stone chips.

2. The WBM (Water Bound Macadam) with brick chips (aggregate) was being used widely during the construction of road as per conventional method/ system in Tripura, as brick aggregates were available at reasonable price.

3. Considering cost, strength and durability of the stone aggregates, it is hereby decided to introduce the item of WMM (Wet Mix Macadam) in place of WBM during construction/ improvement/ strengthening of roads, where all through at least one layer of WBM is required.

4. Therefore, the item of WMM with stone aggregate shall be incorporated in the estimate (s)/ DPR(s) of all new road construction, improvement and strengthening work of roads as per requirement.

(Nirmal Pal)
Deputy Secretary,
PWD(R&B), Agartala
